

ANVESHANS

PROBLEM STATEMENT 1

We have two major aspects to observe:

1. When we hear about Microsoft we know it is for Computer Science Engineers, when about Intel it is the Electronic Engineers and when about General Electric it is for Electrical Engineers. So well defined these are.
2. Chemical Engineering is often considered same as Mechanical Engineering or Paint Technology or Food Technology in few respects. Sometimes the same industry recruits all of them.

So here, the task lies in defining the work of a Chemical Engineer, in the industry as well as in daily life. How are we different from other disciplines like Mechanical Engineering? Explain with the help of suitable examples.
